

Therm

PERIMETER EDGING STRIP

Under Floor Heating

The Product

Edging Strip is for use at the perimeter of separating floors.

Product Specification

- It is a closed cell extruded polyethylene foam available in a variety of convenient sizes
- The closed cell construction of the foam makes it excellent for cushioning vibrations and isolating floors at junctions
- Ensure the rolls are not stored close to any ignition sources
- Avoid contact between the foam and volatile compounds and chemicals such as solvents

Advantages

- Ideal for use in underfloor heating systems
- Compatible for use with traditional semi-dry screeds and liquid screeds
- When stored outside for extended periods, cover with opaque light coloured sheeting to protect from the elements and damage from direct sunlight

Technical Data

- 8mm x 150mm x 25m
